About Us

Mark Baker founded **Thermo Conductor Services** in 1972 after working in thermocouple engineering and quality control at a large wire and cable company. His experience reinforced his belief that the only way to produce high-quality insulated wire and cable is to start with the best thermocouple and copper conductors.

Thermo Conductor Services' mission, then and now, is to provide the highest quality thermocouple and copper conductors, fast delivery and unmatched customer service. And we stay out of competition with our customers, by choosing to provide only uninsulated wire.

TCS operates out of a modern, 34,000-square-foot facility. We offer thermocouple, copper and resistance wire – stranded and solid – in a wide range of sizes and constructions. We can make any stranded construction with silicone sealant for customers who need anticapillary, or water-blocked, conductor. We also offer thermocouple ribbon and strip.

We run each order to the length the customer specifies. And we offer stocking programs, so our customers get the wire they need, when they need it.

Customers ranging in size from small job shops to global corporations make **Thermo Conductor Services** their preferred thermocouple and copper wire supplier.

**ISO 9001
CERTIFIED**
