Copper Wire

Stranded bare copper wire

Thermo Conductor Services supplies stranded, bunched and solid bare copper wire, tinned copper wire, and nickel-plated copper wire.

TCS is recognized as a specialist in making anticapillary wire – stranded conductor that is sealed with a silicone compound to prevent water from being drawn into the wire. These water-blocked constructions are often used in the shipboard industry, in oil wells, and in other marine and military applications. Customers can specify anticapillary coverage ranging from very light to very heavy.
